

Registration Fees:

Student's Fees:

Levels	Course Components
Level - 1	Mental Reading
Level - 2	Telepathy
Level - 3	Clairvoyance
Level - 4	Enhanced Speed Reading
Level - 5	Telekinesis-Mind
Level - 6	Memory Master
Level - 7	Applied ESR
Level - 8	Telekinesis-Energy

* GST is Applicable on all the Payments.

World's best Sensory Enhancement Program for children.
at Brain Child Learning having...

- Experience in brain training since 2005
- Pioneers in sensory enhancement franchising
- Network in 13 countries and expanding...

Enriching the lives of children **Globally**

Five Fundamental Focuses of Brainy SE

Enhancing senses: Better senses, make us better learners, we encourage untraditional sensory learning.

Control of brain waves: Children are taught to practice alpha and theta brain wave state using parapsychological activities.

Specific focus on right brain: Enables new skills such as Creative Visualisation, photo reading, wholesome grasping and photographic memory, which are not taught in any schools.

Raising Emotional quotient: Thru unique bonding with teacher and giving real life values which reaches their subconscious mind to bring overall improvements.

Whole brain development: Including all regions such as frontal, parietal, occipital, temporal and limbic.

WHY BRAINY ?

- Brainy a division of Brain Child Learning is a Malaysian based company, has earned laurels for its Flagship program Brainy Sensory Enhancement Program. It comprises of a well researched foundation, having a concrete syllabus, consisting of eight levels and it thrives on International experience and expertise.
- Brainy's every level has two days workshop and later weekly follow-ups is scheduled for seven weeks. Parents' orientation after every workshop is a part of system.
- Brainy a division of Brain Child Learning was introduced in India by Xplore Knowledge Resources LLP. which has over 350 franchisees and students numbering well over 1,50,000! They are in children brain development education since 2004. We truly understand child and brain better.

ADVANTAGES OF BRAINY COURSE

BRAINY Sensory Enhancement course can give the children many advantages based on real life. Few of them are listed below :

- Memory of the child may become sharp.
- The Concentration of the child Improves and hence learning becomes faster.
- Confidence of the child increases and hence helps him to overcome any task effectively. He is able to face failure, while maintaining his confidence.
- The child can express his feelings and thoughts clearly and effectively. He can solve every problem through innovative ideas.
- The child has better control over his emotions.
- The child may perform better in Academics, sports and creative activities.

Note: Every child is unique and different, hence benefits in each child may vary.

* To achieve the better result in all programs, daily practice is necessary.

BELIEVE IT OR NOT!

It would be difficult to believe but it is true and 100% scientific.

Imagine, there is a common child, living in your neighborhood. Suppose his brain has been trained scientifically for a few days and is brought in front of you, with a black band around his eyes, to ensure that he is unable to see anything around him. Under this condition, do you think that he would be able to perform the following?

- Will he be able to read, if he is given a book in his hands?
- Will he be able to color a given picture with eyes closed?
- Will he be able to describe the color of a card, the number written on it and its shape, if it is raised in front of him from ten feet away?
- Will he be able to move a coin, put on a table in front of him, merely with the help of brain power?
- Will he be able to bend a metal wire or spoon with mind?

It may seem like magic or a miracle. If you think that there must be some trick in tying the bandage but it is not true. Any child between the age of 7 to 16 can do it, if trained systematically in a particular way.

It must be stressed that every child is a genius. He has power and capacity which is known as 'parapsychological ability' in scientific terminology. Now in order to channelize these qualities, the child needs to be trained and cultivated scientifically under expert guidance and supervision. This is called **SENSORY ENHANCEMENT**.

The Amazing Sensory Enhancement Course from Brain Child Learning is now available in India through the Various BRAINY centres pan India.

WHAT IS SENSORY ENHANCEMENT?

We are aware that we have five senses. We feel with the help of skin, taste with the help of tongue, smell with the help of nose, see with the help of eyes and hear with the help of ears. We are able to do all our work with the help of these five senses and the functions of these senses is controlled by a certain part of our brain. If that part of the brain which controls the senses is made powerful, all these five senses will be enhanced and amazing results can be obtained – like ability to see with the eyes shut. Now, imagine the result a child would get if all his senses can miraculously work like that! Wouldn't that child become a super child?

HOW DOES SENSORY ENHANCEMENT WORK?

Our brain is divided into two parts – the left brain and the right brain. The left brain controls logic, sequence, numbers, etc. and the right brain controls rhythm, music, pictures, imagination, creativity, intuition, etc.

It will be surprising to know that our present education system emphasizes majorly on using the left brain. The children are not given sufficient training to develop the right brain. Further to note that both parts of our brain are connected through neural network. But there are still many neural connections those remain dormant, if they are activated and utilized then children can perform amazing deeds, even with their eyes closed.

After years of research, 'BRAINY' program of BRAIN CHILD LEARNING, has developed a special process to enhance the senses of whole brain.
